

Using Everyday Mathematics Games at Home
www.oc.emgames.com

Dear Family,

Games are an important part of the Everyday Mathematics curriculum. We play math games regularly in class to reinforce important skills and concepts, practice basic math facts, and apply problem-solving strategies.

Many of the Everyday Mathematics games can now be played on your home computer.

- An online version allows your child to play the EMGames at home by going to the following website: www.emgames.com. At this website, your child will use the same password that he or she uses at school. You can view and print the directions for each EMGame by clicking the How to Play button.
- Three Family CD versions of the EMGames are also available: one for Early Childhood, one for grades 1-3, and one for grades 4-6. If you would like to order a Family CD, please visit the publisher's website at www.wrightgroup.com.
- How do I log on?
 1. Go to www.oc.emgames.com
 2. Enter your OCPS student number. This number is usually ten digits and usually begins with 4801.
 3. Your password is your birthday. This number needs to be 8 digits. Example: 04031989
